

Technology Due Diligence

Know what is inside

The NeuEon Technology Due Diligence process assists buyers and investors with understanding the technology involved in potential acquisitions.

Technology Due diligence is essential when purchasing a company that relies on technology to fully understand the acquisition.

IT and Cyber Security Focus

Our team of experienced consultants conducts comprehensive evaluations of organizations that leverage Information Technology (IT) as a strategic corporate asset or a key differentiator in their industry.

These evaluations encompass a meticulous assessment of the following key areas:

People: A thorough analysis of the IT team's composition, skills, expertise, and overall effectiveness in achieving the organization's IT objectives. This includes an evaluation of the team's structure, roles and responsibilities, and alignment with industry best practices.

Processes: A detailed examination of the IT team's methodologies, workflows, and standard operating procedures for managing IT projects, operations, and service delivery. This includes an assessment of the team's adherence to industry standards, best practices, and regulatory requirements.

Technology Infrastructure: A comprehensive evaluation of the core IT infrastructure, including hardware, software, networks, and data storage systems. This includes an assessment of the infrastructure's scalability, reliability, security, and performance in supporting the organization's current and future IT needs.

When considering an acquisition or investment, it is essential to evaluate the target company's corporate IT and cybersecurity posture. Begin by defining the goals and expectations of the acquisition/investment.

Some key questions to consider include:

1. Are you acquiring this company for its technology infrastructure?
2. Are there key skills and personnel that you are trying to retain after the acquisition?
3. Does the corporate IT matter, or will the target's infrastructure be absorbed into the parent company after integration?
4. Are you buying legacy infrastructure that is more of a liability than an asset?

Our team leverages industry-leading tools and partners to interpret results and provide additional insights from these add-on services:

Penetration Testing: Identify vulnerabilities from both external and internal sources within the infrastructure.

Third-Party Software Licensing: Identify installed and SaaS licensing inventory.

Dark Web Scanning: Check your exposure on the Dark Web.

Why NeuEon?

Vendor Agnostic

Our unbiased approaches ensures every decision is driven by business requirements and results, not biases or unnecessary constraints.

Engagement Specific Methods

Our proven pattern-matching methodologies have been developed through experience on diverse cross-industry engagements. We know what works (and what doesn't).

Proven Execution

We successfully deliver pragmatic solutions for our clients. Countless clients have seen their own success from the expertise we bring to every engagement.

Trusted Advisors

As challenges arise, leaders lean on us to help them develop solutions. Over three-quarters of our clients have been clients for more than five years. They consider NeuEon their trusted advisors.
